1. About this guide

This guide covers the running of a single store: the product catalogue, receiving and controlling stock, billing customers, handling returns and reading the daily reports. Everything described here applies to your own store only — other branches' figures are never visible to you.

Company-wide setup such as creating stores, storage locations, tax rates and numbering is handled by the Super Administrator before the store opens. If something in that list needs to change, raise it with them rather than working around it.

Sign-in details

Role	Email	Password	Store
Store Administrator	omnia-storeadmin@gmail.com	omnia@123	Omnia

Change this password after your first sign-in, and turn on two-step verification from Settings if the shop handles credit customers.

2. Signing in

Open the Vedix POS desktop application on the counter, or the web address in a browser, and sign in. Pick the current financial year when prompted.

Figure 1. Sign-in screen

Dashboard

The dashboard is the landing page. It gives the day's position at a glance and quick links into the screens used most often.

Figure 2. Dashboard

3. Setting up the catalogue

Do this once, before the first sale. Products cannot be billed until they exist with a price and, where GST applies, an HSN code.

3.1 Categories

Categories group products for searching and reporting — snacks, beverages, stationery and so on.

Figure 3. Category list

Figure 4. Adding a category

3.2 Units of measure

Units describe how an item is sold: piece, kilogram, litre, box.

Figure 5. Units of measure

Figure 6. Adding a unit

3.3 Products

Each sellable item is one product record, carrying its price, unit, category, HSN code and reorder level. Sell the same item in two pack sizes and you create two products, not one with options.

Figure 7. Product list

Figure 8. New product form

Tick Stock tracked for anything you want counted. Items left untracked can still be billed but will never appear in stock reports or low-stock warnings.

3.4 Barcodes

Every product is given a system barcode when it is saved. Print labels from here for loose items, or for anything that arrived without a manufacturer barcode.

Figure 9. System barcodes, ready for label printing

Print one product's label with the Print button on its row, setting how many copies you need; Print All sends the whole list at once.

Figure 10. Printing a single label, with a copy count

4. Customers and suppliers

Walk-in sales need no customer record. Create one when a customer buys on credit, collects loyalty points, or wants a GST invoice in their firm's name.

Figure 11. Customer list

Figure 12. Adding a customer

Suppliers are the parties stock is bought from, and are selected when raising a product request or receiving goods.

Figure 13. Supplier list

Figure 14. Adding a supplier

5. Bringing stock in

5.1 Opening balance

Use this once, when the store starts using the system, to record what is already on the shelves. Enter the quantity held for each product against its storage location.

Figure 15. Opening balance documents

Figure 16. Entering an opening balance

5.2 Product requests

A product request is the order placed on a supplier. Record what was asked for and from whom; the quantities are then carried forward when the goods arrive.

Figure 17. Product requests and their status

Figure 18. Raising a product request

5.3 Stock inward

Stock inward is the goods-receipt entry, and it is what actually increases stock. Record the quantity accepted and, separately, anything rejected on inspection.

Figure 19. Stock inward documents

Figure 20. Receiving goods against a supplier

Where the goods arrived against a product request, pick it up with Select pending request and the outstanding quantities are filled in for you. Accepted plus rejected can never exceed what is still outstanding.

6. Controlling stock

6.1 Damage

Record breakages, expiry and anything else that leaves the shelf unsellable. The quantity is taken out of stock against a reason code.

Figure 21. Damage entries

Figure 22. Recording damaged stock

6.2 Blocks

Blocking sets stock aside without selling it — goods promised to a customer, or held back pending a check. Blocked quantity stays in stock but cannot be billed.

The screenshot shows the 'Stock Block' page in the Vedix POS interface. The left sidebar contains navigation menus for CATALOG, PEOPLE, OPERATIONS, and SETTINGS. The main content area displays a table of blocked stock transactions with columns: Transaction No., Storage, Date, and Actions. Below the table, it indicates '3 records' and provides pagination controls (10 / page, Previous, Page 1 of 1, Next). A 'New Stock Block' button is visible in the top right corner of the main area.

Transaction No.	Storage	Date	Actions
SB/2026-27/0003	saibrakate	12/09/2026	View
SB/2026-27/0002	saibrakate	12/09/2026	View
SB/2026-27/0001	saibrakate	11/09/2026	View

Figure 23. Blocked stock

The screenshot shows the 'New Stock Block' form in the Vedix POS interface. The form includes fields for 'Storage' (a dropdown menu), 'Blocked date' (a date picker set to 01-10-2026), 'Review by date' (a date format dropdown set to dd-mm-yyyy), and 'Items' (a table for adding items). The 'Items' table has columns for Product, Quantity, and Reason. A '+ Add item' button is located to the right of the table. At the bottom right of the form are 'Cancel' and 'Save' buttons.

Product	Quantity	Reason
Select product...	1	Select reason...

Figure 24. Blocking stock

6.3 Transfers

Move stock between your own storage locations, or send it to another branch. A transfer to another store is held as a request until that store accepts it, and the quantity stays blocked at your end in the meantime.

Figure 25. Stock transfers

Figure 26. Raising a transfer

6.4 Adjustments

After a physical count, correct the difference with an adjustment — positive when more was found than the system shows, negative when less. Every adjustment needs a reason code, and the reason is what the auditor will read.

Figure 27. Positive adjustments

Figure 28. Adding stock found on count

Figure 29. Negative adjustments

Figure 30. Writing off a shortage

A negative adjustment cannot take stock below what is actually available; the entry is refused rather than allowed to go negative.

6.5 Quality check

Record a re-test on stock that was set aside. Anything that fails is written off as damage automatically, so there is no second entry to make.

Figure 31. Quality check documents

Figure 32. Recording a quality check

6.6 Low stock

This list shows everything at or below its reorder level for the chosen storage location. Work from it when placing the next order.

Figure 33. Items at or below reorder level

7. Billing

New Bill is the selling screen. Scan or search to add items, set the quantity, apply any discount, take the payment and complete the sale. A bill can be saved as a draft or put on hold if the customer steps away, and picked up later from the draft or held list.

Figure 34. New bill screen

Cash bills are settled at the counter. A credit bill can be completed without payment and collected later. Where the customer pays by QR, payment link or card machine, raise the request from the same screen and the bill closes once the payment is confirmed.

Figure 35. Completed bills

A completed bill can still be corrected for two hours after it is raised — open it and choose Edit. After that window the bill is final and a return or cancellation is the only route.

8. Returns, credit notes and refunds

Start a return from the bill the goods were sold on, and state for each line whether the item came back sellable or damaged; only sellable stock goes back on the shelf.

Figure 38. Refunds paid out

9. Shifts and cash

Open a shift at the start of the counter's day with the float in the drawer, and close it at the end by counting the cash. The system works out what should be there from the sales and refunds recorded, and shows the difference.

11. Adding your own staff

You can create the accounts your store needs without going back to head office. Use Manager for someone who runs the floor and handles stock, and Cashier for someone who only bills.

Figure 43. Users in your store

Figure 44. Creating a cashier or manager

You cannot create another Store Administrator or reach company-level settings. Anyone leaving should be deactivated the same day rather than deleted, so their past entries stay traceable.

12. Daily routine

When	What to do
Opening	Sign in, open the shift with the cash float in the drawer

When	What to do
During the day	Bill customers; record damage as it happens, not at the end
On delivery	Enter stock inward against the supplier or product request
Before closing	Check the low-stock list and raise product requests
Closing	Count the cash and close the shift; look at the day's sales report

Anything this guide does not cover — a new storage location, a change to tax rates, a new bill format — sits with the Super Administrator. Raise it with them rather than working around it.
