1. About this guide

This guide covers the running of a single store: the product catalogue, receiving and controlling stock, billing customers, handling returns and reading the daily reports. Everything described here applies to your own store only — other branches' figures are never visible to you.

Company-wide setup such as creating stores, storage locations, tax rates and numbering is handled by the Super Administrator before the store opens. If something in that list needs to change, raise it with them rather than working around it.

Sign-in details

Role	Email	Password	Store
Store Administrator	omnia-storeadmin@gmail.com	omnia@123	Omnia

Change this password after your first sign-in, and turn on two-step verification from Settings if the shop handles credit customers.

2. Signing in

Open the Omnia POS desktop application on the counter, or the web address in a browser, and sign in. Pick the current financial year when prompted.

Figure 1. Sign-in screen

Dashboard

The dashboard is the landing page. It gives the day's position at a glance and quick links into the screens used most often.

Figure 2. Dashboard

3. Setting up the catalogue

Do this once, before the first sale. Products cannot be billed until they exist with a price and, where GST applies, an HSN code.

3.1 Categories

Categories group products for searching and reporting — snacks, beverages, stationery and so on.

Figure 3. Category list

Figure 4. Adding a category

3.2 Units of measure

Units describe how an item is sold: piece, kilogram, litre, box.

Figure 5. Units of measure

Figure 6. Adding a unit

3.3 Products

Each sellable item is one product record, carrying its price, unit, category, HSN code and reorder level. Sell the same item in two pack sizes and you create two products, not one with options.

Figure 7. Product list

Figure 8. New product form

Tick Stock tracked for anything you want counted. Items left untracked can still be billed but will never appear in stock reports or low-stock warnings.

3.4 Barcodes

Every product is given a system barcode when it is saved. Print labels from here for loose items, or for anything that arrived without a manufacturer barcode.

4. Customers and suppliers

Walk-in sales need no customer record. Create one when a customer buys on credit, collects loyalty points, or wants a GST invoice in their firm's name.

6.4 Adjustments

After a physical count, correct the difference with an adjustment — positive when more was found than the system shows, negative when less. Every adjustment needs a reason code, and the reason is what the auditor will read.

Figure 30. Quality check documents

The screenshot shows the 'New Quality Check' form in the POS system. The left sidebar contains a navigation menu with the following sections: CATALOG (Products, Categories, Units of Measure, System Barcodes, Product Barcodes), PEOPLE (Customers, Suppliers, Users), OPERATIONS (Stores, Storage, Terminals, Payment Methods, Reason Codes, Cash Denominations, Numbering Series, Bill Formats), and SETTINGS (HSN Codes, GST Codes). The main form has a search bar at the top, a date selector set to '2026-27', and a 'Download desktop app' button. Below the search bar, there are tabs for 'Dashboard', 'Stock Quality Checks', and 'New'. The 'New' tab is active, showing the 'New Quality Check' form. The form includes a 'Back to Quality Check' link, a 'Storage' dropdown, a 'Check date' field set to '30-09-2026', a 'Notes' text area, and an 'Items' table. The table has columns for 'Product', 'Quantity', and 'Reason'. There is a '+ Add item' button and a 'Cancel Save' button at the bottom right.

Figure 31. Recording a quality check

6.6 Low stock

This list shows everything at or below its reorder level for the chosen storage location. Work from it when placing the next order.

The screenshot shows the 'Low Stock' screen in the POS system. The left sidebar is the same as in Figure 31. The main screen has a search bar at the top, a date selector set to '2026-27', and a 'Download desktop app' button. Below the search bar, there are tabs for 'Dashboard' and 'Low Stock'. The 'Low Stock' tab is active, showing the 'Low Stock' screen. The screen includes a 'Select storage...' dropdown and a message: 'Select a storage location to check its stock.'

Figure 32. Items at or below reorder level

7. Billing

New Bill is the selling screen. Scan or search to add items, set the quantity, apply any discount, take the payment and complete the sale. A bill can be saved as a draft or put on hold if the customer steps away, and picked up later from the draft or held list.

Figure 33. New bill screen

Cash bills are settled at the counter. A credit bill can be completed without payment and collected later. Where the customer pays by QR, payment link or card machine, raise the request from the same screen and the bill closes once the payment is confirmed.

Figure 34. Completed bills

A completed bill can still be corrected for two hours after it is raised — open it and choose Edit. After that window the bill is final and a return or cancellation is the only route.

8. Returns, credit notes and refunds

Start a return from the bill the goods were sold on, and state for each line whether the item came back sellable or damaged; only sellable stock goes back on the shelf.

Figure 35. Returns raised against bills

Settle the return either as a credit note, which reduces what a credit customer owes, or as a refund, which pays money back. A walk-in customer with no record can only be refunded.

Figure 36. Credit notes issued

Figure 42. Users in your store

Figure 43. Creating a cashier or manager

You cannot create another Store Administrator or reach company-level settings. Anyone leaving should be deactivated the same day rather than deleted, so their past entries stay traceable.

12. Daily routine

When	What to do
Opening	Sign in, open the shift with the cash float in the drawer
During the day	Bill customers; record damage as it happens, not at the end
On delivery	Enter stock inward against the supplier or product request
Before closing	Check the low-stock list and raise product requests
Closing	Count the cash and close the shift; look at the day's sales report

Anything this guide does not cover — a new storage location, a change to tax rates, a new bill format — sits with the Super Administrator. Raise it with them rather than working around it.
